#### Non-GAAP Financial Measures

This press release contains financial measures that are calculated and presented on the basis of methodologies other than in accordance with generally accepted accounting principles in the United States of America. These non-GAAP financial measures should be considered in addition to and not as a substitute for, or superior to, financial measures presented in accordance with U.S. GAAP. The reasons management believes that these non-GAAP financial measures provide useful information are set forth in our most recent Annual Report on Form IO-K filed with the SEC.

#### Notes on Carlyle Consolidated GAAP Results (Page 5)

(1) Income (loss) before provision for income taxes is the GAAP measure that is most directly comparable to Distributable Earnings, which management uses to measure the performance of the business. A full reconciliation is included starting on page 29.

Disclosures referring to carry funds also include the impact of certain commitments that do not earn carried interest, but are either part of, or associated with our carry funds. The rate of carried interest, as well as the share of carried interest allocated to Carlyle, may vary across the carry fund platform. See "Non-GAAP Financial Measures" for more information. A reconciliation of accrued performance revenue accrual driven by positive or negative movements in portfolio valuation, incremental preferred return and fees, foreign exchange fluctuations and acquisition/divestiture activity. #### otes on Assets Under Management (Pages II-I3)

Notes on Assets Under Management (Pages II-13)
(1) Total Assets Under Management refers to the assets we manage or advise, and reflects the sum of the unrealized Fair Value of Investments and Available Capital.
(2) Available Capital refers to the amount of capital commitments available to be called for investments, which may be reduced for equity invested that is funded via fund credit facility and expected to be called from investors at a later date, plus any additional assets/liabilities at the fund level other than active investments. Amounts previously called may be added back to available capital following certain distributions.
(3) Credit (Non-Carry Funds) includes our CLOs, business development companies and related managed accounts, the Carlyle Tactical Private Credit Fund, as well as securitization vehicles and various managed accounts in our Carlyle Aviation business. "Other" includes the NGP Predecessor funds and certain managed account vehicles.
(4) Fair Value of Investments generally reflects the unrealized carrying value of investments for all carry funds, related co-investment vehicles and separately managed accounts, the aggregate collateral balance of our CLOs and other securitization vehicles, and the gross asset value of our business development companies.
(5) The In-Carry Ratio represents the percentage of Fair Value in our Traditional Carry Funds (Global Private Equity and Global Credit), which is accruing performance revenue as of the quarter-end reporting date. This metric does not address the realization of performance revenue.

  (2) Represents oll realized proceeds since inception of the fund.
  (3) Represents oll realized proceeds since inception of the fund.
  (3) Represents remaining fair value, before management fees, expenses and carried interest, and may include remaining escrow values for realized investments.
  (4) Multiple of invested capital ("MOIC") represents total fair value, before management fees, expenses and carried interest, divided by cumulative invested capital.

(4) Multiple of Invested capital (MOL.) represents total fair value, before management fees, expenses and carried interest, divided by cumulative invested capital. (6) An investment is considered realized when the investment fund has completely exited, and cess to own an interest in, the investment is considered partially realized when the total amount of proceeds received in respect of such investment, including dividends, interest or other distributions and/or return of capital, represents at least 85% of invested capital and such investment is not yet fully realized. Because part of our value creation strategy involves pursuing best exit alternatives, we believe information regarding Realized/Partially Realized MOIc and Gross IRR, when considered tagether with the other investment performance metrics presented, provides investors with meaningful information regarding our investment performance by removing the impact of investments where significant realization activity has not yet occurred. Realized/Partially Realized MOIC and Gross IRR have limitations as measures of investment performance, and should not be considered in isolation. Such limitations include the fact that these measures do not include the performance of earlier stage and other investments that do not satisfy the criteria provided above. The exclusion of such investments will have a positive impact on Realized/Partially Realized MOIC and Gross IRR in instances when the MOIC and Gross IRR in irrespect of such investments are less than the aggregate MOIC and Gross IRR. Our measurements of Realized/Partially Realized MOIC and Gross IRR may not be comparable to those of other companies that use similarly titled measures.

Gross IRR is calculated based on the timing of actual investment cash flows for the fund. Subtotal Gross IRR aggregations for multiple funds are calculated based on actual cash flow dates for each fund and represent a theoretical time-weighted return for a Limited Partner who invested sequentially in each fund.

Net IRR is calculated based on the timing of Limited Partner cash flows, which may differ to varying degrees from the timing of actual investment cash flows for the fund. Fund level IRRs are based on aggregate Limited Partners. As a result, certain funds may generate accrued performance revenues with a blended Net IRR that is below the preferred return hurdle for that fund. Subtotal Net IRR aggregations for multiple funds are calculated based on actual cash flow dates for each fund and represent a theoretical time-weighted return for a Limited Partner who invested sequentially in each fund.

Notes on Reconciliation for Distributable Earnings per Share (Page 28)
(I) Estimated current corporate, foreign, state and local taxes represents the total GAAP Provision (benefit) for income taxes adjusted to include only the current tax provision (benefit) applied to Net income (loss) attributable to The Carlyle Group Inc. This adjustment used to calculate Distributable Earnings. Net attributable to common stockholders reflects the benefit of deductions available to the company on certain expense Items that are excluded from the underlying calculation of Distributable Earnings, such as equity-based compensation expense and charges (credits) related to corporate actions and non-recurring items. Management believes that using the estimated current tax provision (benefit) in this manner more accurately reflects earnings that are available to be distributed to common stockholders.

(2) Estimated DE effective tax rate is calculated as the estimated current corporate, foreign, state and local taxes divided by Distributable Earnings.
